Survival is assumed to be similar across states and is based on observed survival among cases diagnosed in SEER 18 areas during 2003-2009, followed through Dec 2010. The estimated 1-5 year survivors do not include 2014 cases because survival is defined here as those surviving at least 1 year. The number of 1-5 year survivors is estimated by the summation of 5 products: 2009 estimated cases multiplied by the 5-year observed survival rate, 2010 estimated cases multiplied by the 4-year observed survival rate, 2011 estimated cases multiplied by the 3-year observed survival rate, 2012 estimated cases multiplied by the 2-year observed survival rate, and 2013 estimated cases multiplied by the 1-year observed survival rate.
